

**KADI SARVA VISHWAVIDHYALAYA**  
**B.E. Semester-VII Examination- November-2016**

**Subject Code :-CE 701**

**Subject Name:-Compiler Design**

**Date:- 8/11/2016**

**Time:-10:30 AM to 1:30PM**

**Total Marks:-70**

**Instructions:**

1. Answer each section in separate Answer sheet.
2. Use of scientific calculator is permitted.
3. All questions are **Compulsory**.
4. Indicate **clearly**, the options you attempt along with its respective question number.
5. Use the last page of main supplementary of **rough work**.

**Section - I**

**Q-1 (All compulsory)**

- (A) Explain the working of front end of the compiler with suitable example. [5]
- (B) Justify with example: left recursive and non left factored grammars cannot be LL(1) grammars. [5]
- (C) Justify the use of symbol table by different phases of the compiler. [5]

**OR**

- (C) Explain the error recovery strategies of parser. [5]

**Q-2 Answer the following questions.**

- (A) Construct a minimum state DFA for the given RE using subset construction:  
 $(a|b)^*a(a|b)a^*\#$  [5]
- (B) Explain Handle and Handle pruning with suitable example. [5]

**OR**

- (A) Construct a minimum state DFA for the given RE using subset construction:  
 $(a|bc^*)c? a(a|b)a^*\#$  [5]

- (B) Explain Input Buffering and sentinels. [5]

**Q-3 Answer the following questions.**

- (A) Draw minimized DFA for given expression using syntax tree method.  
 $a^*(a|b)^*(a|b)\#$  [5]
- (B) Test whether the following grammar is LL(1) or not? Also, construct Predictive Parsing table for the same. [5]  
 $S \rightarrow ACB | cbB | Ba$   
 $A \rightarrow da | BC$   
 $B \rightarrow g | e$   
 $C \rightarrow h | e$

**OR**

- (A) Draw minimized DFA for given expression using syntax tree method. [5]

- $c*a*(a|b)(a|b)*c\#$
- (B) Test whether given grammar is LL(1) or not? Also, draw predictive parsing table for the same. [5]
- $P \rightarrow 1PB \mid e$
- $Q \rightarrow 1PC \mid \&C$
- $B \rightarrow \&S$
- $C \rightarrow 1$

## Section – II

- Q-4 (All compulsory)
- (A) Prepare operator precedence table for grammar, [5]
- $S \rightarrow (L) \mid a$
- $L \rightarrow L, S \mid S$
- Also, parse the string (a,a).
- (B) What is a shift-reduce parser? Explain in detail the conflicts that may occur during shift- reduce parsing. [5]
- (C) Explain synthesis and inherited attributes. [5]

OR

- (C) What are intermediate code representations? Explain triple, quadruple and Indirect triple with suitable example. [5]
- Q-5 Answer the following questions.
- (A) Explain any two code optimization techniques with examples. [5]
- (B) Check whether following grammar is LALR or not: [5]

$S \rightarrow Aa \mid bAc \mid Bc \mid bBd$

$A \rightarrow d$

$B \rightarrow d$

OR

- (A) Construct SLR parsing table for following grammar and state whether it is SLR or not. [5]
- $S \rightarrow aBc \mid bCc \mid aCd \mid bBd$
- $B \rightarrow e$
- $C \rightarrow e$

- (B) Explain: i) Copy Propagation ii) Dead-code Elimination [5]

- Q-6 Answer the following questions.

- (A) Draw DAG and Abstract Syntax Tree for following expression: [5]
- $c = a*b + d*(-b)/a*b$
- (B) Construct 3A code and draw flow graph for the following code segment: [5]
- $prod = 0; n = 5;$
- $for(i = 0; i \leq n; i++)$
- {
- $prod += a[i]*b[i];$
- }

```
i++;  
}
```

OR

(A) Explain activation tree and activation record. [5]

(B) Construct 3A code for following code: [5]

```
prod=0; n=5;  
p=10;  
for( i=0; i<=n; i++)  
{  
  if(a[i]<p)  
  {  
    prod+=a[i]*b[i];  
  }  
  else{  
    prod+=a[i];  
  }  
  i++;  
}
```

----- All the Best-----

**KADI SARVA VISHWAVIDHYALAYA**  
**B.E. Semester-VII Examination-November-2015**

Subject Code:-CE 701

Subject Name:-Compiler Design

Date:-20/11/2015

Time:-10:30 AM to 1:30PM

Total Marks:-70

**Instructions:**

1. Answer each section in separate Answer sheet.
2. Use of scientific calculator is permitted.
3. All questions are **Compulsory**.
4. Indicate **clearly**, the options you attempt along with its respective question number.
5. Use the last page of main supplementary of **rough work**.

**Section - I**

Q-1 (All compulsory)

(A) **Select the correct option(each carry one mark):**

[10]

1. Which of the following suffices to convert an arbitrary CFG to an LL(1) grammar?

- (a) Removing left recursion alone
- (b) Factoring the grammar alone
- (c) Removing left recursion and factoring the grammar
- (d) None of the single above

2. Consider a program P that consists of two source modules M1 and M2 contained in two different files. If M1 contains a reference to a function defined in M2 the reference will be resolved at

- a) Edit time
- b) Compile time
- c) Link time
- d) Load time

3. Given the following expression grammar:

$E \rightarrow E * F \mid F + E \mid F$

$F \rightarrow F - F \mid id$

which of the following is true?

- (a) \* has higher precedence than +
- (b) - has higher precedence than \*
- (c) + and - have same precedence
- (d) + has higher precedence than \*

4. Pick the machine independent phase of Compiler.

- (a) Lexical analysis
- (b) Syntax analysis
- (c) Semantic analysis
- (d) All of the above

**5. Which of the following is the most powerful parser?**

- (a) SLR
- (b) CLR
- (c) LALR
- (d) Operator Precedence

**6. Predictive parsing can be:**

- (a) Recursive
- (b) Non Recursive
- (c) Constructive
- (d) Both a and b

**7. The type of Conflicts LR(0) parsing can have:**

- (a) Shift-Shift
- (b) Shift-Reduce
- (c) Reduce-Reduce
- (d) Both b and c

**8. Can regular grammar be ambiguous?**

- (a) Always
- (b) Not always, depends on grammar
- (c) Never

**9. Which of the following statements is false?**

- (a) An unambiguous grammar has same left most and right most derivation
- (b) LL(1) parser is a top-down parser
- (c) LALR is more powerful than SLR
- (d) An ambiguous grammar can never be LR(K) for any k

**10. Dynamic linking can cause security concerns because**

- (a) Security is dynamic
- (b) The path for searching dynamic libraries is not known till run time.
- (c) Linking is insecure
- (d) Cryptographic procedures are not available for dynamic linking

- (C) What does parsing mean in the context of compilers? Explain with suitable example. [5]

**OR**

- (C) Which data structure is suitable to implement Symbol table? Justify your answer. [5]

Q-2 Answer the following questions.

- (A) Construct a minimum state DFA for the given RE using subset construction: [5]  
 $b(a|b)^*a(a|b)a^*\#$
- (B) Explain the elimination of left recursion and left factoring with suitable example. [5]

**OR**

- (A) Construct a minimum state DFA for the given RE using subset construction: [5]  
 $(a|b)^*a(a|b)a^*\#$
- (B) Explain Error recovery strategy for Lexical analyzer. [5]

Q-3 Answer the following questions.

- (A) Draw minimized DFA for given expression using syntax tree method. [5]  
 $(a|b)^*a(a|b)^*(a|b)\#$
- (B) Construct Predictive Parsing table for following grammar. [5]  
 $S \rightarrow S \#$   
 $S \rightarrow aXYZ$   
 $X \rightarrow q | bbD$   
 $Y \rightarrow q | \epsilon$   
 $Z \rightarrow b | \epsilon$   
 $D \rightarrow c | \epsilon$

OR

- (A) Draw minimized DFA for given expression using syntax tree method. [5]  
 $c^*a(a|b)^*(a|b)\#$
- (B) Test whether given grammar is LL(1) or not? Construct Predictive Parsing table for it. [5]  
 $bexpr \rightarrow bexpr \text{ or } bterm | bterm$   
 $bterm \rightarrow bterm \text{ and } bfactor | bfactor$   
 $bfactor \rightarrow \text{not } bfactor | (bexpr) | \text{true} | \text{false}$

## Section – II

Q-4 (All compulsory)

- (A) Prepare operator precedence table for grammar. [5]  
 $S \rightarrow xAy | xBy | xAz$   
 $A \rightarrow aS | q$   
 $B \rightarrow q$
- (B) Test whether given grammar is LL(1) or not? Justify. [5]  
 $S \rightarrow lAB | \epsilon$   
 $A \rightarrow lAC | \&C$   
 $B \rightarrow \&S$   
 $C \rightarrow l$
- (C) Compare the Syntax directed definition with Syntax directed Translation Scheme. Highlight the uses of it. [5]

OR

- (C) What are three address code representations? Also explain record structures used for three address code. [5]

Q-5 Answer the following questions.

- (A) What is the necessity of optimization in compilation? Can human being optimize a program better than automated compiler? Justify your answer. [5]
- (B) What is activation record? What type of information kept in it? Explain its structure. [5]

OR

- (A) Explain peephole optimization with example. [5]
- (B) Write short note on: Code optimization techniques. [5]

Q-6 Answer the following questions.

(A) Construct SLR parsing table for following grammar. [5]

$S \rightarrow PP$

$P \rightarrow pP$

$P \rightarrow d$

(B) Construct 3A code and draw flow graph for the following code segment: [5]

Prod=0;

i=1;

do {

  prod+=a[i]\*b[i];

  i++;

} while(i<=20);

**OR**

(A) Construct CLR parsing table for following grammar. [5]

$Stat \rightarrow LHS=RHS$

$Stat \rightarrow RHS$

$LHS \rightarrow *RHS$

$LHS \rightarrow id$

$RHS \rightarrow LHS$

(B) Draw DAG and Abstract Syntax Tree for following expression: [5]

$c = a * b + d * (-b) / a * b$

----- All the Best -----
