Subject Name: Software Engineering

Subject Code: CE 603

Teaching Scheme (Credits and Hours)

Teaching scheme					Evaluation Scheme					
L	Т	P	Total	Total Credit	Tl	heory	Mid Sem Exam	CIA	Pract.	Total
Hrs	Hrs	Hrs	Hrs		Hrs	Marks	Marks	Marks	Marks	Marks
03	00	02	05	4	3	70	30	20	30	150

Learning Objectives:

- To learn and understand the Concepts of Software Engineering
- To Learn and understand Software Development Life Cycle
- To apply the project management and analysis principles to software project development.
- To apply the design & testing principles to software project development.

Outline of the Course:

Sr. No	Title of the Unit	Minimum Hours
1	Introduction	3
2	Software Development Process Models	6
3	Software Requirement Analysis and Specification	9
4	Software Design	5
5	Coding	4
6	Software Testing and Quality Assurance	7
7	Managing Software Projects	9
8	Current trends in Software Engineering	2

Total hours (Theory): 45

Total hours (Lab): 30

Total hours: 75

Detailed Syllabus

Sr. No	Topic	Lecture Hours	Weight age (%)
1	Introduction		
	Software		
	What is software?		
	Types of software		
	Characteristics of Software		
	Attributes of good software	3	10
	Software Engineering		
	What is software engineering?		
	Software engineering costs		
	What are the key challenges facing software engineering?		
	Systems engineering & software Engineering		
2	Software Development Process Models		
	What is a software process?		
	What is a software process model?		
	The waterfall model		
	Evolutionary development		
	Component-Based Software Engineering (CBSE)		
	Process Iteration		
	Incremental delivery		10
	Spiral development	6	10
	Rapid software development		
	Agile methods		
	Extreme programming		
	Rapid application development (RAD)		
	Software prototyping Computer Aided Software Engineering (CASE)		
	Computer Aided Software Engineering (CASE) Overview of CASE approach		
	Classification of CASE tools		
3	Software Requirement Analysis and Specification		
3	System and software requirements		
	Types of software requirements		
	Functional and non-functional requirements		
	Domain requirements		
	User requirements		
	Elicitation and analysis of requirements		
	Overview of techniques	9	15
	Viewpoints		10
	Interviewing		
	Scenarios		
	Use-cases		
	Process modeling with physical and logical DFDs		
	Entity Relationship Diagram		
	Data Dictionary		

	Requirement validation		
	Requirement specification Software requirement Specification (SRS)		
	Structure and contents		
	SRS format		
	Feasibility		
4	Software Design		
7	Design concepts		
	Abstraction		
	Architecture		
	Patterns		
	Modularity		
	Cohesion		
	Coupling		
	Information hiding	5	10
	Functional independence		10
	Refinement		
	Design of input and Control		
	Design of User Interface design		
	Elements of good design		
	Design issues		
	Features of modern GUI - Menus, Scroll bars, windows,		
	Buttons, icons, panels, error Messages etc.		
5	Coding		
	Programming languages and development tools		
1	1 Togramming ranguages and development tools		
	Selecting languages and tools	4	5
		4	5
	Selecting languages and tools Good programming practices Coding Standards	4	5
6	Selecting languages and tools Good programming practices Coding Standards Software Testing and Quality Assurance	4	5
6	Selecting languages and tools Good programming practices Coding Standards Software Testing and Quality Assurance Verification and validation	4	5
6	Selecting languages and tools Good programming practices Coding Standards Software Testing and Quality Assurance Verification and validation Techniques of testing	4	5
6	Selecting languages and tools Good programming practices Coding Standards Software Testing and Quality Assurance Verification and validation Techniques of testing Black-box and White-box testing	4	5
6	Selecting languages and tools Good programming practices Coding Standards Software Testing and Quality Assurance Verification and validation Techniques of testing Black-box and White-box testing Inspections	4	5
6	Selecting languages and tools Good programming practices Coding Standards Software Testing and Quality Assurance Verification and validation Techniques of testing Black-box and White-box testing Inspections Levels of testing	4	5
6	Selecting languages and tools Good programming practices Coding Standards Software Testing and Quality Assurance Verification and validation Techniques of testing Black-box and White-box testing Inspections Levels of testing Unit testing	4	5
6	Selecting languages and tools Good programming practices Coding Standards Software Testing and Quality Assurance Verification and validation Techniques of testing Black-box and White-box testing Inspections Levels of testing Unit testing Integration Testing	4	5
6	Selecting languages and tools Good programming practices Coding Standards Software Testing and Quality Assurance Verification and validation Techniques of testing Black-box and White-box testing Inspections Levels of testing Unit testing Integration Testing Integration Testing Interface testing	7	5
6	Selecting languages and tools Good programming practices Coding Standards Software Testing and Quality Assurance Verification and validation Techniques of testing Black-box and White-box testing Inspections Levels of testing Unit testing Integration Testing Interface testing System testing		
6	Selecting languages and tools Good programming practices Coding Standards Software Testing and Quality Assurance Verification and validation Techniques of testing Black-box and White-box testing Inspections Levels of testing Unit testing Integration Testing Integration Testing System testing Alpha and beta testing		
6	Selecting languages and tools Good programming practices Coding Standards Software Testing and Quality Assurance Verification and validation Techniques of testing Black-box and White-box testing Inspections Levels of testing Unit testing Integration Testing Interface testing System testing Alpha and beta testing Regression testing		
6	Selecting languages and tools Good programming practices Coding Standards Software Testing and Quality Assurance Verification and validation Techniques of testing Black-box and White-box testing Inspections Levels of testing Unit testing Integration Testing Interface testing System testing Alpha and beta testing Regression testing Design of test cases		
6	Selecting languages and tools Good programming practices Coding Standards Software Testing and Quality Assurance Verification and validation Techniques of testing Black-box and White-box testing Inspections Levels of testing Unit testing Integration Testing Interface testing System testing Alpha and beta testing Regression testing Design of test cases Quality management activities		
6	Selecting languages and tools Good programming practices Coding Standards Software Testing and Quality Assurance Verification and validation Techniques of testing Black-box and White-box testing Inspections Levels of testing Unit testing Integration Testing Integration Testing System testing Alpha and beta testing Regression testing Design of test cases Quality management activities Product and process quality		
6	Selecting languages and tools Good programming practices Coding Standards Software Testing and Quality Assurance Verification and validation Techniques of testing Black-box and White-box testing Inspections Levels of testing Unit testing Integration Testing Interface testing System testing Alpha and beta testing Regression testing Design of test cases Quality management activities Product and process quality Standards		
6	Selecting languages and tools Good programming practices Coding Standards Software Testing and Quality Assurance Verification and validation Techniques of testing Black-box and White-box testing Inspections Levels of testing Unit testing Integration Testing Integration Testing System testing Alpha and beta testing Regression testing Design of test cases Quality management activities Product and process quality		

7	Managing Software Projects		
	Need for the proper management of software projects		
	Management activities		
	Project planning		
	Software Size Estimation and Cost Estimation		
	Software Estimation –Size Estimation		
	Function Point Analysis		
	LOC Estimation		
	What is Productivity		
	COCOMOII		
	Project scheduling	9	30
	Task set for Software project	9	30
	Defining a task network		
	Scheduling		
	Earned value analysis		
	Risk management		
	Reactive versus proactive Software Risk		
	Risk Identification		
	Risk projection,		
	Risk refinement		
	Risk mitigation, monitoring & management-The RMMM		
	Managing people		
8	Current trends in Software Engineering		
	Software Engineering for projects and products.	2	5
	Introduction to Web Engineering and Agile process		
	Total	45	100

Instructional Method and Pedagogy:

- At the start of course, the course delivery pattern, prerequisite of the subject will be discussed.
- Lectures will be conducted with the aid of multi-media projector, black board, OHP etc.
- Attendance is compulsory in lecture and laboratory which carries 10 marks in overall evaluation.
- One internal exam will be conducted as a part of internal theory evaluation.
- Assignments based on the course content will be given to the students for each unit and will be evaluated at regular interval evaluation.
- Surprise tests/Quizzes/Seminar/tutorial will be conducted having a share of five marks in the overall internal evaluation.
- The course includes a laboratory, where students have an opportunity to build an appreciation for the concepts being taught in lectures.
- Experiments shall be performed in the laboratory related to course contents.

Learning Outcome:

Software engineering is a subject that emerged recently as a result of the need to manage software projects that are rising in demand day by day. Software is developed in diverse areas and the fact that a systematic approach is required to manage their development spawns this interesting subject of study.

After successfully completing this module the student will be able to explain the software engineering principles and techniques that are used in developing quality software products.

Reference Books:

- 1. Software Engineering: A practitioner's approach by Roger S. Pressman, 7th edition, McGraw-Hill International edition
- 2. Software Engineering by Ian Sommerville, 7th edition, Addison-Wesley.
- 3. Fundamentals of Software Engineering by Rajib Mall

List of experiments:

Pract. No.	Title
1.	Preparing Software Requirements Specifications
2.	Identifying Domain Classes from the Problem Statements
3.	Modeling UML Class Diagrams and Sequence diagrams
4.	Modeling UML Use Case Diagrams and Capturing Use Case Scenarios
5.	E-R Modeling
6.	State chart and Activity Modeling
7.	Modeling Data Flow Diagrams
8.	Estimation of Project Metrics
9.	Estimation of Test Coverage Metrics and Structural Complexity
10.	Designing Test Suites
11.	Preparing Final Project Report
